REPORT

OF THE

GENERAL COMMITTEE OF GOVERNORS

OF ST. LUKE'S HOSPITAL,

FOR THE YEAR 1857.

To the Court of Governors of

St. Luke's Hospital.

Your Committee in making their Annual Report for 1857, desire to inform the Court of Governors that, in consequence of the further alterations and improvements effected in the Hospital, and the increased cost of the establishment, your Committee have been compelled to direct the sale of £5,000. Stock of the Invested Capital Fund of the Hospital to meet the current expenditure, making a total of £15,025. Stock sold since the Centenary in 1851.

During the past year the attention of your Committee has been painfully directed to the insufficiency of the Annual Income, as compared with the expenditure required to maintain the Charity in its present position of efficiency and usefulness,—the excess of expenditure over income now amounting to upwards of £2,000. per annum.

A short appeal has been advertized from time to time, but in consequence of the numerous and pressing claims of other kindred institutions, the engrossing sympathy of the public with the sufferers by the Indian Mutiny, and the critical condition of commercial affairs, the result has not been satisfactory.

Your Committee, with a desire to extend, as far as possible, the benefits of this Institution to the middle classes of society, and acting upon the recommendation contained in the Report of the Medical Officers about to be submitted to the Court, have agreed to a Resolution as follows:—

"That it be recommended to the Court, that under the direction "of the Committee, such alterations in the Regulations be "made, as may be found on examination to be necessary, "in order that Patients whose friends are able and willing "to pay for their care and maintenance, may be received "into the Hospital, upon such terms and under such re-"strictions and regulations as the Committee may deem "expedient."

Since the last Annual Court, the Commissioners in Lunacy have made their usual official visit to the Hospital, pursuant to Sec. 61 of the Act 8 and 9 Vic., c. 100. Their observations, dated 13th March, 1857, are recorded in the "Visitors' Book," kept for the purpose. After referring to the improvements and alterations effected since their former visit, the Commissioners conclude their Report in the following words: "We were, upon "the whole, well satisfied with the improved state and arrange-"ment of the Hospital. The Nurses especially, appeared to us "of a superior order; and the management of the Institution "generally, in our opinion, reflects much credit upon the Super-"intendent, Matron, and other officers."

(Signed) R. W. S. LUTWIDGE, } *Commissioners*
S. GASKELL, } *in Lunacy.*

Your Committee report that in July last, an offer was made on the part of your Committee, to rent from the parish authorities of Saint Luke's the vacant ground belonging to the parish, situate

at the rear of the Hospital, and formerly used as a Pauper Burial Ground, at an Annual Rental of £30., so as to afford increased space for the amusement and occupation of the patients. This offer was, however, declined by the Parish Authorities, on the ground that the amount proposed was "wholly inadequate." It was further stated to your Committee, that the sum of £100. a year had been mentioned as the amount at which the Authorities would be willing to let the ground in question. Your Committee being of opinion that the amount originally offered, namely, £30. a year, was a sufficient sum, have not felt justified in making any further proposition on the subject.

Your Committee announce with regret the decease, on the 16th September, 1857, of Henry Denton, Esq., late a Member of the Committee, and one of the most active and useful Governors of this Corporation. By his will, dated 25th August, 1857, he has bequeathed to the Charity a Legacy of £500., free of duty.

With respect to supplies for the past year, Your Committee contracted from the 1st April, until the 30th September last, for the usual kinds of Butcher's Meat at 4s. 11d. per stone of 8 lbs.; and have further contracted from the 1st October last until the 31st March next, for the same, at the rate of 4s. 7d. per stone of 8 lbs. Your Committee contracted from the 1st April until the 30th September last, for the best wheaten bread at 7½d. for a 4 lb. loaf; for flour at 11s. per bushel; and for oatmeal at 2s. 4d. per peck; and have further contracted from the 1st October last to the 31st March next, for the best wheaten bread at 7¼d. for a 4 lb. loaf; for flour at 10s. 3d. per bushel; and for oatmeal at 2s. 4d. per peck.

As regards the Patients admitted to the benefits of this Charity, your Committee report that there have been received into the Hospital since the 31st December, 1856, and up to the 31st December, 1857, 150 patients deemed curable.

During the same period, there have been discharged cured 95; uncured 41; as unfit 14; at the request of their friends 4; and there have died 13. Since the 30th July, 1751, the day on

which the Hospital was first opened for the reception of Patients, and up to the 31st December 1857 inclusive, there have been admitted into the Hospital 19,328 patients, DEEMED CURABLE ON THEIR ADMISSION; of whom there have been discharged,

Cured	8,585
Uncured	6,638
As Idiots, diseased or unfit	1,879
By the desire of friends	547
From having (after admission) appeared to have been with child at the time of admission...	62
Having proved to have been Insane more than twelve calendar months before the application to be admitted	14
The friends not complying with the Rules of the Hospital...	57
Having been found to be, in point of circumstances, improper objects for this Charity...	2
Having been found to have been previously discharged, uncured, from another Hospital for Lunatics	5
From not being Lunatics	2
There have died in the Hospital since its first opening	1,469
There remain on the books of the Hospital on the 31st December, 1857, deemed curable	68
TOTAL	19,328

Since the opening of the Hospital in 1751, and up to the 31st of December, 1857, there have been re-admitted 749 patients DEEMED INCURABLE, who had been previously discharged uncured, *exclusive* of those patients (eight in number) who have, from time to time, been re-admitted, by virtue of an Annuity Deed (dated 11th June, 1788) of the late Samuel Whitbread, Esq., deceased; and since the 31st December, 1856, and up to the 31st December, 1857,—five patients, *deemed incurable on re-admission*, have been discharged at the request of friends; 3 friends not complying

with rules; 8 upon trial; 3 have died; and 26 have been re-admitted.

Of the said 749 patients (re-admitted as Boarders) *exclusive* of the Whitbread patients,—

103 have been discharged by the desire of friends.
40 have been discharged cured.
8 upon trial.
11 uncured.
9 by order of the Committee, being Paupers.
27 in consequence of the friends not complying with the Rules of the Hospital.
5 being deemed, in point of circumstances, improper objects for the Charity.
460 have died, and
86 were in the Hospital on the 31st December last, *exclusive* of Mr. Whitbread's patient.

Total 749.

The average weekly number of Patients in the Hospital during the year has been as follows, viz.; 60 males and 107 females, total 167.

The total number of Patients remaining on the books on the 31st December, 1857, was 155, namely, 68 Patients deemed curable, and 87 boarders, including Mr. Whitbread's patient.

Your Committee recommend that the Right Honorable Lord Overstone be requested to continue the honor to this Charity by being its President.

That the Right Honourable the Earl of Abingdon, the Right Honourable Lord Aveland; the Right Honourable Lord Viscount Eversley; Sir Edmund Antrobus, Baronet; James Bentley, Esq.; and William Henry Whitbread, Esq., be re-elected Vice-Presidents of this Corporation.

That Henry Francis Shaw Lefevre, Esq., be re-elected Treasurer.

Your Committee have prepared a List of Governors, whom they submit to the Court as fit and proper persons to act as the General Committee for the year ensuing.

And finally, Your Committee recommend that the remaining Honorary Officers of this Corporation be severally re-elected, pursuant to the regulations.

All of which is nevertheless submitted.

REPORT

OF THE

Physicians and Medical Superintendent,

FOR THE YEAR 1857.

To the President, Vice-Presidents, Treasurer, and Governors, of St. Luke's Hospital.

My Lords, Ladies, and Gentlemen,

Another year having expired since we last had the honor of laying before you our Report on the condition of the Hospital, it becomes our duty again to address you.

In reviewing the Hospital economy during the past year, we are pleased to find that we can record nothing but what must be satisfactory and gratifying to all. We have had an unusually small amount of sickness, a fair per centage of cures, though this last has not been quite so large as it was in the year immediately preceding; no suicide, or even accident deserving the name of serious, and an increased and increasing general comfort and harmony in the various Wards.

We feel that we are enabled to make so favorable a Report, owing in great measure to the many improvements that have been carried out in the Wards during the past year, through your liberality and kindness. We especially refer to the adoption of swing glazed sashes over some of the bedroom doors, in the place of the old open wire grating; this alteration has enabled the Attendants to keep up a fair amount of ventilation, and at the same time to materially diminish, if not entirely to control the draughts, at one time so common throughout the Hospital.

We should be pleased to find that your Committee felt justified in incurring the necessary expense for placing similar contrivances over all the remaining bedroom doors in the Hospital.

We also feel that not a little additional comfort and enjoyment has resulted to the Patients, from the fact of almost all the Walls within the Hospital having been papered with good and cheerful patterned paper during the past year: though not of so great importance to the general health of the inmates as the improvements just alluded to, nevertheless we cannot help expressing our belief that not one of the numerous and large outlays made by the Governors for the improvement of St. Luke's Hospital, has effected so much towards altering the former dismal aspect and character of the house, as the last: and none has been so thoroughly appreciated by the Patients.

The Wing Wards, on the Male side, still remain unaltered and unimproved; and they form, with their inmates, a very unhappy contrast with the Wing Wards on the other side of the Hospital.

We know that in the present condition of the Funds of the Charity, it would be unreasonable, if not hopeless, to suggest further costly alteration, though we hope the day is not far distant which shall see the Male Refractory Wards made as comfortable, and cheerful, and suitable to their objects, as those for the Females. Here we should remark, that since the alteration of the Wing Wards on the Female side of the Hospital, we not only find the Patients much more tidy and well behaved, but seclusion is hardly ever used or called for; and the accidents, formerly so frequent, owing to violence of one Patient to another, are now never met with, as the Patients in the altered Wards are always under the eye of the Attendant.

On the Male side, the Wards still consist of two apartments, and it results naturally that when the Ward is left in charge of but one Attendant, one apartment alone can be properly watched, and hence a cause of occasional disorder. It can hardly be supposed that we too highly prize this alteration of the Wards, which enables us to keep all the Patients under constant obser-

vation, when we state that of the unfortunate creatures last year entrusted to our care, one-half were reported to have meditated, or had actually attempted, self-destruction before admission.

While advocating further improvements, and acknowledging those that have been made, we cannot help admitting that we feel a certain amount of disappointment that the Hospital, so greatly changed—so much improved, in fact with every means at its disposal for the accomplishment of the Governors' object—the treatment of the Insane, and this, gratuitously, should experience, year by year, a gradual, and certain, though slow diminution in the number of admissions. This is of course in a great measure, and perhaps mainly owing to the construction of numerous County Asylums, which afford a ready refuge to that class that was for many years almost entirely dependent on the endowed Hospitals for the Insane ; but we think that the falling off in the number resident in the Hospital is owing, to a considerable extent, to the fact, that the Charity and its Rules are but very imperfectly known throughout the country. We wish to call your attention particularly to this diminution in the number of admissions, feeling sure that contemplating the reception of other classes than those heretofore received, you will adopt some plan which shall enable the largest possible number of the indigent Insane to reap the benefit of your liberal benevolence.

If, as we hope, you consider this matter of sufficient importance to arrest your attention, and to call for your further consideration, we would remind you that there is a very large class of suffering humanity—a class whose troubles and privations are but little heard of out of their own immediate circles—whose wants, in respect of care of their insane, you might materially relieve in your Institution : we allude to the tolerably well-to-do professional man and tradesman. People in this class would shrink from becoming actually objects of charity, but would willingly pay a small—to us remunerative—sum for the care and treatment of an afflicted member of their family, and yet be quite unable, as our disqualifying Rule has it, to provide for their "decent support in a Private Asylum." A relaxation of the Rules of

the Hospital, or a sufficiently liberal interpretation of them to enable people of this class to be received, might be the means of somewhat augmenting the annual income of the Charity.

We cannot help regretting that in spite of the praiseworthy and strenuous efforts made by your Committee during the year, no progress has been made towards obtaining possession of the adjacent piece of ground belonging to the Parish; and the acquisition of which, together with the removal of a few of the remaining walls, and some re-arrangement of the out buildings, would so materially enlarge and improve the airing courts. We hope that this important matter will still continue to occupy the attention of the Governors. In making these remarks, we must again express our gratification and thanks for the great change that has been brought about inside the Hospital. With the exception of the two items referred to above, viz., the alteration of the Male Wing Wards, and the general adoption of swing sashes over the Bed Room doors, we believe that all has been done within the building that could be reasonably required.

There is one matter to which we would, in conclusion, beg to call your attention. It has always been a great desideratum in the treatment of insanity, to associate the Patients as much as possible with healthy and vigorous minds, and we have never lost sight of this aim in the selection of the Attendants, both Male and Female; but as we have observed from time to time, the increased order and general decorum that pervades the Wards, it has occurred to us, that we might venture to ask you to consider how far it would be advisable to admit to the Wards, under regulations to be framed by your Committee, a certain number of Ladies and Gentlemen, who would take an interest in the work, to act as Visitors to the Patients. We feel that this might be carried out at any rate by a Committee of Ladies on the Female side of the House; such visitors would call at the Hospital in rotation, on two or three days in the week, and acting under the guidance of our excellent Matron, would associate with and endeavour to soothe and amuse the Patients: they would prove a great comfort to the poor inmates at the time, and we are sure

would materially assist in our united labors for the amelioration of their condition.

The Attendants, to whom we cannot award too great praise for their kindness, forbearance, and general good conduct, cannot be supposed to have such freshness or versatility of mind and spirits as we should have placed at our disposal by some such arrangement as the one proposed for your consideration; and we feel sure that recent events have shown what the women of England will undertake when the objects in view are the relief of misery, and the succour of the distressed.

Again thanking you for your polite attention to our many remarks and suggestions,

We have the honour to be,

My Lords, Ladies, and Gentlemen,

Your very faithful Servants,

(Signed) A. J. SUTHERLAND, M.D., Oxon.

HENRY MONRO, M.B., Oxon.

HENRY STEVENS, M.D., Lond,

Medical Superintendent.

St. Luke's Hospital,

9th February, 1858.

TABLES FOR 1857—*continued.*

N°. XII.

NUMBER *of* DEATHS *of* CURABLE *and* INCURABLE PATIENTS *during the year* 1857, *shewing the assigned causes thereof.*

	Males.	*Females.*	*Total.*
Disease of the Liver and Lungs	1	—	1
Exhaustion	1	3	4
Heart Disease	2	1	3
Inflammation of the Uterus	—	1	1
Peritonitis	—	1	1
Phthisis	1	3	4
Pulmonary Apoplexy	1	—	1
Pulmonary Gangrene	1	—	1
Total	7	9	16

TABLE OF POST-MORTEM APPEARANCES.

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections	Mode of Death.	Date of Post Mortem Examination.	General External Appearance.	Scalp.	Cranium.	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance.		
S. M.	56	Female. — Single.	Mania.	14 days.	Phthisis.	Syncope.	January 20th, 1857. — 20 hours p.m.	Body much emaciated.	Scalp not adherent.	Calvaria thin, especially the temporal fossæ.		Sinuses and veins of Pia Mater full of fluid blood. Considerable serous effusions in sub-arachnoid space.	Brain healthy, firm.	A good deal of frothy mucus in larynx and trachea, otherwise natural. Pleuræ universally adherent on both sides. Lungs. Right, gorged with blood and frothy serum throughout, especially lower lobe, thickening, small deposits of tuberculous matter, and cicatrices at apex. Left. Similarly gorged at apex; a large Vomica, the size of a small apple—broken down on removing lung—contained cheesy tuberculous matter. Heart adherent to pericardium over right ventricle; right auricle very thin.	Liver healthy; gall bladder full of bile. Kidneys soft, easily broken down. Intestines healthy.

TABLE OF POST-MORTEM APPEARANCES—*continued.*

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant. Bodily Affections.	Mode of Death.	Date of Post Mortem Examination.	General External Appearances	Scalp.	Cranium	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance.		
E. B.	55	Male. — Single.	Dementia,	36 Years.	Hepatic and Renal disease.	Syncope.	February 25th, 1857. — 30 hours p.m.	Body in good condition.	Occipito frontalis loosely attached.	Cranium of ordinary thickness.	44¾ ozs.	Dura Mater very adherent to bone. Sinuses full.	Brain healthy; grey matter abundant. Sp. gr. 1039. White matter Sp. gr. 1041.	Lungs slightly adherent, particularly on left side. Great infiltration and congestion of lower lobe of left lung. Lung-tissue easily broken down; right lung crepitant; much fat in anterior mediastinum. Heart. Anterior surface covered with fat; fibrinous clots in right side. Firm and pale.	Liver universally adherent to diaphragm and adherent by fibrinous bands to stomach and colon; numerous bands of adhesion between viscera of abdomen generally; numerous small gall stones in gall bladder. No appearance of bile. Substance of the liver very granular, presenting the "nutmeg" appearance. Kidneys contracted, lobulated; large cyst on surface of left. Capsule not very adherent. Surface slightly granular on section; cortical substance appeared much diminished.

TABLE OF POST-MORTEM APPEARANCES—*continued.*

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections.	Mode of Death.	Date of Post Mortem Examinations.	General External Appearance.	Scalp.	Cranium.	Weight of Brain.	CEREBRAL. Membranes.	CEREBRAL. Substance.	Thorax.	Abdomen.
E. F.	45	Female. — Single.	Melancholia.	2 Months.	Peritonitis.	Syncope.	Feb. 24th, 1857. — 20 hours p.m.	Body thin, large goitre.		Calvaria thin.	50½ oz.	Dura Mater not adherent; veins of Pia Mater rather full.	Brain healthy, firm —vessels slightly congested.	Lungs adherent at apices; apices cicatrized; a few small yellow tubercles in apex of left; small straw coloured effusions in left pleural cavity. Heart, fatty on anterior surface; right side extremely attenuated; fibrinous clots in cavities.	Abdomen presented appearance of considerable peritonitis, especially at lower part, (purulent effusion as well as serous;) surface of intestines granulated; stomach and liver healthy. Kidneys small, contracted, capsule adherent; substance breaking down on removal of capsule; cortical structure much diminished. Small fibrinous tumour in cavity of uterus, and also one in substance of fundus.
J. B.	61	Male. — Married.	Mania.	6 Weeks.	Heart and Kidney disease.	Asphyxia.	March 25th. 1857. — 20 hours p.m.	Body well formed, with little sub-cutaneous adipose tissue.	Very thin.	Calvarium symmetrical.		Dura Mater firmly adherent from vertex to coronal suture.	Brain much congested; about 4 ozs. of serum escaped on its removal. Brain generally softened, especially Corpora striata and Opticthalami; Grey matter very dark; but little fluid in ventricles; choroid had no cysts.	Heart large, full of recent clots; left ventricle much hypertrophied, and aortic orifice contracted; Lungs both slightly adherent to pleuræ costales, much engorged; extravasation of blood in small patches in many places; Bronchi loaded with frothy mucus.	Stomach and bowels apparently healthy. Liver very granular and brittle; Gall bladder enormously distended with dark coloured bile. Kidneys very soft, readily breaking down on compression between thumb and finger; other viscera healthy.

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections	Mode of Death.	Date of Post Mortem Examination.	General External Appearance.	Scalp.	Cranium.	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance.		
M. B	28	Female. — Single.	Mania.	2 Weeks.	Pneumonia.	Coma.	April 29th. 1857. — 26 hours p.m.	Body emaciated, well formed.	Thin. Anœmic.	Calvarium thick, symmetrical.	48¼ ozs.	Dura Mater easily separable from skull cap; sinuses engorged.	Brain much congested; considerable quantity of serum escaped on removal; Grey matter Sp. Gr. 1040, White do. 1045. Brain firm, healthy; ventricles contained no fluid. Grey matter in broad Median band very visible generally.	Heart loaded with adipose tissue externally — large, healthy. Lungs both immensely congested throughout, and Bronchi loaded with frothy mucus.	Stomach and bowels apparently healthy; Liver pale, healthy; other viscera healthy; Uterus very cartilaginous. Ovaries recently ruptured.
L. H.	30	Female. — Married.	Mania.	1 Month.	Puerperal state.	Syncope.	May 29th 1857. — 12 hours p.m.	There were some bruises of the scalp; a large sore over each scapula, & another very foul over the sacrum.	The scalp was adherent, with extravasations underneath it at the posterior part; it bled freely on detaching it.	The Calvaria was of unusual thickness and weight.	46 ozs.	Dura Mater and other membranes, natural.	The Brain was healthy, only somewhat congested. Grey matter Sp. Gr. 1038, White do. 1041.	The Pericardium contained a small quantity of straw coloured fluid. The surface of the heart was thickly covered with shreds of lymph, which were firmly adherent. The Lungs were healthy.	The Gall bladder was distended with yellow bile, and all the neighbouring viscera were stained with the same. The Liver was healthy. The Kidneys were soft, with several small abscesses on the surface.

TABLE OF POST-MORTEM APPEARANCES—*continued.*

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections	Mode of Death.	Date of Post Mortem Examination.	General External Appearance.	Scalp.	Cranium.	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance.		
M. E. A.	30	Female. — Single.	Chronic Melancholia.	Four Years.	Phthisis	Syncope.	Sept. 1st 1857. — 24 hours p.m.	Body very much emaciated.	Scalp very thin.	Calvarium eburnated symmetrical	47¾ oz.	Dura Mater easily separated, thin; Membranes quite bloodless; much sub-arachnoid effusion.	Brain very soft and almost diffluent in places; Ventricles contained only the usual amount of serum; Choroid granular, Median band visible generally.	Heart very small indeed, firmly contracted on both sides, and hypertrophied at the expense of cavities; Lungs both studded with tubercles, some small points of softening at apices; left pleura contained bands of adhesion of old standing, some puckering in one or two places towards apex of left lung.	Stomach healthy; several patches of ulceration in small intestines near cœcum. Liver pale, rather friable and unctuous. Kidneys and other viscera healthy.
R. H.	64	Male. — Widower.	Melancholia.	Six Months.	Heart disease followed by Pulmonary Gangrene.	Coma.	Sept. 3rd 1857. — 10 hours p.m.	Body well formed and well nourished.	Natural.	Calvarium very thick, symmetrical, much diplœ.	51 oz.	Dura Mater adherent in places Pia Mater much injected, slight sub-arachnoid effusion.	Brain generally very soft; Grey matter very pale; Median band visible at some points. Ventricles contained no fluid.	Heart loaded with adipose tissue, right auricle much dilated, lungs, right much congested, not crepitant, loaded with frothy mucus; left quite gangrenous; both pleuræ contained small quantities of serum.	Liver healthy; gall bladder contained some pale straw colored fluid Stomach and bowels healthy, with the exception of some extensive patches of congestion in latter. Kidneys, bladder, &c. healthy.

TABLE OF POST-MORTEM APPEARANCES—*continued.*

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections.	Mode of Death.	Date of Post Mortem Examination.	General External Appearances	Scalp.	Cranium.	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance.		
W. W.	55	Male. — Widower.	Melancholia.	Six Weeks.	Heart disease.	Coma.	Sept. 14th, 1857. — 30 hours p.m.	Body much emaciated; several cachectic sores on shoulders and upper extremities and anthrax on out side of shin.	Very adherent.	Calvarium dense in structure, very heavy, symmetrical	52¼ oz. Sp. Gr.	Dura Mater easily separable, very thick; Arachnoid healthy; Pia Mater congested.	Sp. Gr. Grey matter 1036, White matter 1040, many bleeding puncta on section. Median band scarcely visible anywhere, softening in ventricles; Brain generally very soft and remarkably so in Corpus Callosum and optic thalami Cerebellum butyraceous.	Heart distended with fluid blood on right side; right auricle very much dilated and thinned. Lungs healthy, congested.	Liver much congested, bled freely on section. Kidneys slightly granular, would not peel cleanly. Bowels much congested. Stomach and other viscera healthy.
M. A. F.	44	Female. — Married.	Mania.	One Month.	Ovarian disease, &c.	Syncope	Sept. 22nd, 1857. — 18 hours p.m.	Body much emaciated large sloughs in several places on each forearm, and one the size of a palm on sacrum.	Scalp adherent very firmly.	Calvarium symmetrical		Dura Mater very thin, easily separable. Pia Mater much congested. Arachnoid slightly opalescent in places.	Brain healthy, firm. Grey matter in very broad layer, Median band not discernible; ventricles contained usual amount of fluid; choroid granular.	Heart loaded with fat, otherwise healthy. — Lungs congested.	Stomach very much congested in patches. Liver pale, friable, greasy. Gall bladder full of greenish fluid bile. Bowels healthy. Kidneys granular; cortical substance coming off with capsule. Ovaries contained very large cysts, some two or three as large as hen's eggs, full of pale straw coloured fluid. Uterus contained small polypus. Bladder and other viscera healthy.

TABLE OF POST-MORTEM APPEARANCES.

Name.	Age.	Sex and Domestic Condition.	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections.	Mode of Death.	Date of Post Mortem Examination.	General External Appearances	Scalp.	Cranium.	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance.		
R. H.	33	Female. — Married.	Mania.	10 days.	Puerperal state, purulent absorption.	Syncope.	Sept. 23rd, 1857. — 6 hours p.m.	Body well formed and nourished.	Natural.	Calvarium asymmetrical, much diplœ.		Membranes healthy, quite natural.	Brain generally healthy, firm, few bleeding puncta on section; choroid granular; ventricles contained about a drachm of serum; Median band in grey matter well marked.	Old pleurisy on right side, lung very universally adherent.—Lungs generally healthy. Heart contained fluid blood; right auricle and ventricle much distended; Aorta also full of fluid blood.	Stomach healthy. Liver pale, somewhat friable. Gall bladder full of very pale greenish biliary matter. Kidneys somewhat congested. Peritoneum inflamed, small collections of pus in several places in peritoneum. Bowels healthy; external coats inflamed. Uterus, containing a large mass of adherent placenta, large and uncontracted; several points of purulent deposit. Bladder and other viscera healthy.

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections.	Mode of Death.	Date of Post Mortem Examination.	General External Appearances	Scalp.	Cranium.	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance.		
J. L.	20	Male. — Single.	Mania.	Few weeks.	Phthisis.	Syncope.	October 8th, 1857. — 12 hours p.m.	The body was emaciated.	Firmly adherent.	Calvarium very thick.	49 ozs.	Nothing abnormal apparent.	The Brain appeared healthy.	The Heart was rather large, with a good deal of fat on the anterior surface. The valves were healthy. The pleuræ were universally and strongly adherent on each side; in removing the right lung several vomicæ at the apex were broken into; this lung was completely full of tubercle in different stages with many cavities, none of them, however of any great size; the left lung was similarly blocked up with tubercle. Towards the apex there was much extravasated blood, and in a cavity there were several blood clots.	The liver was large, of a nutmeg appearance, and rough on its exterior and anterior surface; it was much congested. The Kidneys were very large, especially the left, which weighed 8¼ ounces. They were to all appearance healthy. The remaining viscera were healthy.

TABLE OF POST-MORTEM APPEARANCES—*continued.*

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections.	Mode of Death.	Date of Post Mortem Examination.	General External Appearances	Scalp.	Cranium.	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance		
T. M.	53	Male. — Married.	Mania.	7 Months.	Old Hepatic Derangement.	Coma.	Oct. 14th, 1857. — 12 hours. p.m.	Body Emaciated.	The scalp was very slightly adherent to the bone.	The calvaria was of average thickness, and symmetrical	47 ozs.	The Dura Mater very slightly adherent; Pacchionian bodies very numerous and large. Arachnoid opaque, with some effusion in its cavitiy. Vessels of Pia Mater congested.	Brain soft; grey matter pale; a small amount of clear fluid in lateral ventricles; choroid without cysts. The cerebellum very soft.	Lungs slightly adherent, the adhesion breaking down easily; the substance of the lungs healthy and crepitant. Heart small, but firm in its muscular texture, and the cavities contracted; the valves healthy.	The abdominal viscera deeply and generally tinged with bile. The liver very dark in colour, and congested, of average size, and firm in texture. Gall bladder distended, with very dark, grumous looking bile. Stomach distended, but healthy; half full of liquid food. Kidneys small; the cortical structure rather diminished in amount, and the capsule somewhat adherent. The spleen and intestines were healthy.

Name.	Age.	Sex and Domestic Condition	Mental Malady.	Duration of Malady.	Concomitant Bodily Affections.	Mode of Death.	Date of Post Mortem Examination.	General External Appearances	Scalp.	Cranium.	Weight of Brain.	CEREBRAL.		Thorax.	Abdomen.
												Membranes.	Substance.		
C. W.	51	Female. — Single.	Chronic Dementia.	25 Years.	Phthisis.	Syncope.	Oct. 19th, 1857. — 12 hours p.m.	Body thin; sores on lips and tongue.	Scalp thick, not adherent.	Calvaria thick and heavy, symmetrical.	43 ozs.	The Dura Mater contained many Pacchionian bodies, otherwise natural. Sub-arachnoid space contained a considerable quantity of fluid, and there was considerable opacity of the membranes; vessels of the Pia Mater largely distended.	The Brain generally very dark in colour; many bleeding puncta; the convolutions widely separated, especially at the summit of the hemispheres. There was a small quantity of fluid in the ventricles, and a good deal escaped on removing the brain.	The pericardium contained about 2 drachms of straw-coloured fluid. Heart was large; outside covered with fat, particularly on the anterior surface; the right cavities considerably enlarged, but without much attenuation of the walls. Substance of the heart was soft, easily breaking down between the finger and thumb. The valves were natural. Both lungs were adherent at their apices and posterior parts; both contained numerous large vomicæ towards their apices, and large quantities of tuberculous matter, in various stages of progress, with signs of recent Pnuemonia.	The Liver was large; the anterior margin sharp and thin. The substance on section presented a "nutmeg" appearance. There was a small accessory spleen, about the size of a kidney bean. The intestines and bladder healthy. The kidneys small. The cortical structure thin; otherwise healthy. The gall bladder was small, scarcely containing any fluid. There was some slight inflammation round the Os uteri, apparently of some standing.
